

Here's to Beer!

Protecting one of America's favorite beverages

Four Main Ingredients

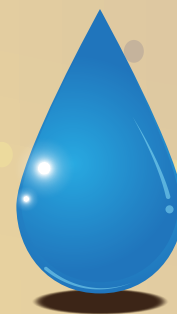

Hops

Barley

Yeast

Water

Downy mildew is a destructive disease in hop production and can damage **100% of hop yields** if significant cone infection or plant death occurs.

Hop scab caused a loss of 71.9 million bushels of barley across the nation in 2014. A multi-pronged approach, including fungicides and management practices, can decrease losses.

The responsible use of **Integrated Pest Management** helps combat these pathogens, leading to healthy hops, barley and, of course, more beer!
